There are 5 Li-Ning badminton racket series that cater to 5 distinct play styles. What play style best reflects you?

- **Superior Offensive Play Style**
- **Offense Oriented Play Style**
- **Quick Hands Play Style**
- **Control Focused Play Style**
- **Balanced Play Style**
Now consider the following 5 key racket characteristics...

**GRIP SIZE**
The grip size affects the overall comfort in holding the racket but more importantly it influences shot technique and accuracy.

Many players now use a smaller grip so they can hold and control the racket with their fingers to create more power and greater deception.

Most Li-Ning rackets are available in an Extra Small grip size. Look for [XS] after the name online. Some are also available in a Small grip size which is indicated with a [SM].
Now consider the following 5 key racket characteristics...

**BALANCE POINT**
The balance point refers to the overall distribution of the weight of the racket.

A higher balance point results in a head heavy racket that is designed to generate more power vs. a lower balance point which gives the racket a head light feel. A mid balance point gives the racket a steady even feel.

It is the combination of the overall racket weight and the balance point that will greatly determine how heavy or light a racket seems making the balance point integral to the overall weight of the racket.
Now consider the following 5 key racket characteristics...

**OVERALL WEIGHT**
The overall weight of the racket has a significant impact on the feel of the racket and is a primary factor in determining the right fit for you.

Contrary to what many players believe, a lighter racket is not necessarily better! Heavier rackets develop more power over lighter ones.

Remember, in the transfer of momentum, mass is pivotal. Lighter rackets benefit from increased dexterity making them superior for defense and net play.
Flexibility refers to the ability of the racket shaft to flex while swinging the racket. A common misconception is that flexible rackets result in better performance.

This is not necessarily the case. Very strong players with powerful swings can benefit from a stiff shaft to achieve additional power and control.

Average players with an average swing speed can benefit from a soft to medium flex shaft as it helps to generate additional repulsion power without any loss of control.
Now consider the following 5 key racket characteristics…

STRING TENSION
A more advanced racket construction will allow for higher string tensions. Li-Ning rackets with the letter “N” in the name are made from the finest military grade carbon fibre and are typically used by a famous national or international player. This allows for horizontal string tensions of up to 30 pounds and vertical string tensions of up to 28 pounds.

High string tensions will result in greater power to a point. String tensions above 28 pounds result in less power as repulsion is decreased however there is a slight increase in control. Higher string tensions increase the risk of breaking the racket strings and even the racket frame so we always recommend moderation even where the maximum string tension rating is high.
Li-Ning Badminton Racket Guide

Feels Great!

And there is nothing like finding a Li-Ning racket that feels great and compliments your play style!
Superior Offensive Play Style • Continuous Explosive Attacking!
Li-Ning Badminton Racket Guide

MEGA POWER SERIES

Superior Offensive Play Style • Continuous Explosive Attacking!

The Mega Power Series is specially designed for offense oriented players who want to play with maximum power. This popular series includes badminton rackets with a higher balance point giving it a heavier head while delivering tremendous shuttle striking capabilities.

The integration of our unique multi-polymer and carbon fiber reinforcing technology adds numerous layers and strength to key racket points. Increased strength and power of the shaft along with other reinforced areas makes this racket one of the most durable offensive and power driven rackets on the market today.

Quick Hands Play Style • Light Weight Rackets for Fast Play
EXTRA SKILL SERIES

Quick Hands Play Style • Light Weight Rackets for Fast Play

The Extra Skill Series is the ultimate collection of badminton rackets for players who enjoy a lighter racket for fast reaction times and quick decisive play. Most of the models in this series include lighter frames and flexible shafts making the badminton rackets more active.

Integration of a UHB shaft and Aerotec Beam System reduces the drag coefficient and improves the flexibility of the racket head. Gain better control of your racket as you produce advanced strokes and shots from the forecourt and the backcourt.

Control Focused Play Style • Strong Offense, Defense and Control
MULTI CONTROL SERIES

Control Focused Play Style • Strong Offense, Defense and Control

The Multi Control Series is designed for badminton players who want a combination of solid defense, strong offense and good control. The Multi Control Series badminton rackets include generous head designs that feature oversized sweet spots and flexible shafts.

The hi-tech dynamic optimum frame delivers increased stability and exciting power. Confidently face challenging opponents and counter act shuttle re-directs and change with greater consistency. The Multi Control Series helps you stay calm in the heat-of-the-moment and gives you the extra edge that you need to win.
